Fraction Quiz

1) What fraction has numerator 6 and is equal to $\frac{1}{2}$?

2) What fraction has denominator 20 and is equal to $\frac{3}{4}$?

3) What fraction has numerator 15 and is equal to $\frac{5}{7}$?

4) What fraction has numerator 9 and is equal to three-eighths?

5) What fraction has denominator 30 and is equal to $\frac{5}{6}$?

6) What fraction has denominator 21 and is equal to two-thirds?

7) What fraction has numerator 32 and is equal to $\frac{4}{11}$?

8) What fraction has denominator 12 and is equal to five-sixths?

9) What fraction has numerator 8 and is equal to $\frac{1}{3}$?

10) What fraction has numerator 44 and is equal to $\frac{4}{7}$?

Answers

1) What fraction has numerator 6 and is equal to $\frac{1}{2}$?

$$\frac{6}{12}$$

2) What fraction has denominator 20 and is equal to $\frac{3}{4}$?

$$\frac{15}{20}$$

3) What fraction has numerator 15 and is equal to $\frac{5}{7}$?

$$\frac{15}{21}$$

4) What fraction has numerator 9 and is equal to three-eighths?

$$\frac{9}{24}$$

5) What fraction has denominator 30 and is equal to $\frac{5}{6}$?

$$\frac{25}{30}$$

6) What fraction has denominator 21 and is equal to two-thirds?

$$\frac{14}{21}$$

7) What fraction has numerator 32 and is equal to $\frac{4}{11}$?

$$\frac{32}{88}$$

8) What fraction has denominator 12 and is equal to five-sixths?

$$\frac{10}{12}$$

9) What fraction has numerator 8 and is equal to $\frac{1}{3}$?

$$\frac{8}{24}$$

10) What fraction has numerator 44 and is equal to $\frac{4}{7}$?

$$\frac{44}{77}$$
